

Terragen

CASE STUDY: WA Beef Producer Demonstrates Impact of Terragen Probiotics

A leading WA beef producer conducted a client-led trial comparing standard feedlot performance with and without Terragen Biotech's Probiotic for Ruminants.

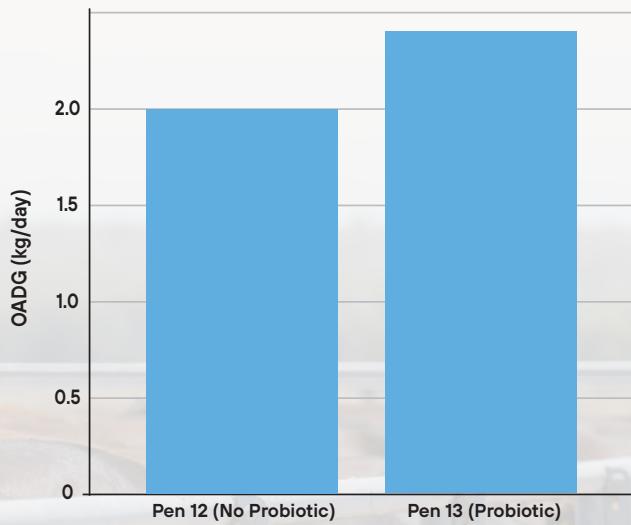

The goal:

Measure real-world impact on growth, health, and efficiency.

Key Outcomes:

- » OADG improvement: 2.368 vs 2.017 kg/day (+17.4%) (351g)
- » Sick treatments reduced: 5 vs 13
- » Earlier drafting: 26 days vs 28–33 days
- » Higher max weight: 558 kg vs 522 kg

Overall Average Daily Gain (OADG)

"We were impressed by the difference. The probiotic group not only gained weight faster but stayed healthier, which meant less time and cost managing sick animals. Drafting earlier was a bonus—it's clear this product adds value."
